Abstract

NaufalVerse is a digital ecosystem startup building a new world order through blockchain-integrated gaming. The **\$NAVE token** is the native utility token of the NaufalVerse ecosystem, deployed on the Solana blockchain.

At its core, NaufalVerse operates **NVX**, a Minecraft anarchy server with no anti-cheat — a deliberate design choice that fosters a competitive environment where creativity, coding skill, and ingenuity determine the strongest players. \$NAVE holders gain exclusive in-game perks on NVX, including item frame duplication and a colored username, creating a direct bridge between blockchain ownership and gameplay.

This document outlines the vision, tokenomics, technical architecture, and utility of the \$NAVE token within the NaufalVerse ecosystem.

Introduction: The New World Order

NaufalVerse was founded with a singular vision: to create a **new digital world order** — a decentralized ecosystem where technology, gaming, and community converge. We believe that the future of digital interaction lies not in walled gardens, but in open, permissionless environments where creativity and skill are the only limits.

Our journey begins with **NVX**, a Minecraft anarchy server that redefines what a game server can be. This is only the first building block. The NaufalVerse ecosystem will expand to encompass:

- **NVX Anarchy Server** — The flagship product: a no-anti-cheat Minecraft anarchy experience.
 - **Web3 Integration** — Solana blockchain wallet connectivity for token-gated perks.
 - **Community Governance** — \$NAVE holders will shape the future of the ecosystem.
 - **Expanded Products** — Future games and digital experiences under the NaufalVerse umbrella.
-

The NVX Philosophy

NVX is not a typical Minecraft server. It is an **anarchy server without anti-cheat** — a deliberate and intentional design choice. Most anarchy servers implement some form of anti-cheat; NVX does not. The reasoning is fundamental to the NaufalVerse vision.

Many of our players use advanced clients such as **Meteor Client** and create custom Java addons — from instant mace-kill mechanics to complex automation. Rather than treating this as a problem to be solved, we see it as the **core value proposition** of the server.

Core Belief: In an unrestricted environment, the strongest players are not those with the most playtime, but those with the most **creativity, coding ability, and ingenuity**. NVX is a battleground of ideas — where Java developers, hack creators, and survival players coexist in digital Darwinism.

The server naturally accommodates three player archetypes:

- **Hackers and Coders** — Players who create custom Meteor addons and exploit mechanics. They drive the meta and push the boundaries of what is possible within the game.
- **Survival Players** — Players who enjoy classic vanilla survival gameplay within the chaos. They adapt, build, and thrive despite the lack of rules.
- **Social Players** — Players who use the server as a social hub for building communities and enjoying the anarchy sandbox.

This diversity is not a bug — it is a **feature**. NVX is a living ecosystem where every playstyle has a place, and where \$NAVE holders gain additional tools to express their dominance.

The \$NAVE Token

\$NAVE is an SPL token on the **Solana blockchain**, chosen for its low transaction costs, high throughput, and broad ecosystem of wallet support including Phantom and OKX.

TOKEN NAME NAVE Token	TICKER \$NAVE
BLOCKCHAIN Solana	STANDARD SPL Token
MINT ADDRESS DPDrNWyMTtoEQU TacPzM3ZPYhsjYGEFzU54 aNfQxxpump	MIN. FOR PERKS 500,000 \$NAVE

The token is traded on **pump.fun**, providing immediate liquidity and a fair launch mechanism. There is no presale and no team allocation — the token is community-driven from inception.

Disclaimer: \$NAVE is a **utility token**, not a security. It grants access to in-game features and ecosystem benefits on NVX. Its value is derived from utility and demand within the NaufalVerse ecosystem.

Tokenomics

\$NAVE follows a transparent tokenomic model. The supply is determined by the pump.fun bonding curve, with no additional minting or inflation. Key principles:

- **Fair Launch:** No pre-mine, no VC allocation, no team tokens. All tokens are acquired through the open market.
- **Liquidity:** Tokens are traded on pump.fun with automatic liquidity locking.
- **Utility-Driven:** Token value is sustained by real demand for in-game perks on NVX.
- **No Staking:** At launch, there is no staking mechanism. Utility is purely access-based.

To unlock premium perks, holders must maintain a minimum balance of **500,000 \$NAVE** in their connected Solana wallet. This threshold ensures perks are reserved for committed community members while remaining accessible.

Utility and Perks

Holding \$NAVE grants tangible, in-game benefits on the NVX Minecraft anarchy server. These perks are enforced through the NAVE Sync Plugin, a custom Spigot plugin that continuously monitors wallet balances via a Cloudflare Worker API and synchronizes player status in real time.

Current Perks

- **Colored Username.** \$NAVE holders receive a colored username in-game, distinguishing them from free players whose names appear in default gray. Shop ranks (VIP and VVIP) are separate and do not include \$NAVE perks.
- **Item Frame Duplication.** The fastest dupe method on NVX. \$NAVE holders can duplicate items by placing them in an item frame and rotating it. Non-holders may access slower, more difficult dupe methods, but the item frame method is exclusive to \$NAVE holders.

How to Access

1. Acquire \$NAVE tokens on pump.fun.
2. Connect your Solana wallet (Phantom or OKX) via the Web3 Portal.
3. Link your Minecraft username to your wallet.
4. Join NVX at nvxverse.xyz and enjoy your perks.
5. Perks remain active as long as your wallet holds at least 500,000 \$NAVE.

Note: Shop ranks (VIP, VVIP) have a fixed 6-month duration and do not include \$NAVE perks. Players may hold both a shop rank and \$NAVE simultaneously, stacking benefits.

Technical Architecture

The NaufalVerse Web3 infrastructure consists of three core components:

1. Web3 Portal (Frontend)

A browser-based interface hosted on Cloudflare Pages that provides wallet connection (Phantom, OKX), \$NAVE balance display via Helius RPC, and Minecraft account linking.

2. Cloudflare Worker API

A serverless API handling three endpoints:

- `POST /api/link` — Links a Minecraft username to a Solana wallet address, stored in Cloudflare KV.
- `DELETE /api/unlink/{username}/{wallet}` — Removes an existing link with wallet verification.
- `GET /api/status/{username}` — Returns wallet address, \$NAVE balance, and holder status.

The status endpoint is consumed by the Minecraft plugin for real-time permission enforcement.

3. NAVE Sync Plugin (Minecraft)

A custom Spigot plugin running on the NVX server. It periodically queries the Cloudflare Worker API for each online player's \$NAVE status and executes LuckPerms commands to grant or revoke the `nave` group. The plugin checks balances on player join and at configurable intervals (default: 5 minutes).

Roadmap

PHASE	TIMELINE	DELIVERABLES
Phase 1	Completed	\$NAVE token launch on pump.fun, NVX server launch, basic Web3 portal
Phase 2	Current	NAVE Sync Plugin, item frame dupe for holders, colored username perk, whitepaper
Phase 3	Future	Dependent on community ideas, founder decisions, and feedback from the NaufalVerse Discord. Potential directions include in-game \$NAVE shops, token-gated areas, or expanded mechanics.
Phase 4	Future	To be determined based on ecosystem maturity, community governance, and emerging opportunities. May include cross-project integrations or additional game modes.

Security

Security is a priority for the NaufalVerse ecosystem. The following measures are in place:

- **Wallet Verification.** The Cloudflare Worker verifies wallet ownership before allowing account linking. Username hijacking is prevented through duplicate-check logic at both the frontend and API level.
 - **Read-Only Frontend.** The Web3 Portal never requests transaction signing or private keys. It only reads public wallet information.
 - **KV Storage.** Mapping data is stored in Cloudflare KV, providing encrypted, globally-replicated storage.
 - **RPC Rate Limiting.** Balance queries are routed through Helius RPC with rate limiting to prevent abuse.
-

Team

NaufalVerse is founded and operated by **Naufal Indrasta Afiya Syadid**, a solo founder building the ecosystem independently. Currently, the project operates without employees or staff — all development, infrastructure, and community management are handled directly by the founder.

To assist the community, the NaufalVerse Discord server features custom AI chatbots built by the founder that handle general inquiries about the ecosystem, as well as automated bots for server management and moderation. This lean approach allows the project to remain agile and focused on delivering value to the community.

Conclusion

NaufalVerse represents a new paradigm in blockchain-integrated gaming. By combining the raw, unrestricted environment of NVX anarchy with the transparency and accessibility of Solana blockchain technology, we are building an ecosystem where **skill, creativity, and ownership** converge.

The \$NAVE token is not merely a speculative asset — it is the key that unlocks the full NVX experience. From colored usernames to exclusive dupe mechanics, \$NAVE holders enjoy tangible benefits that enhance their gameplay and status within the community.

We invite you to join us in building this new world order. Acquire \$NAVE, connect your wallet, and experience NVX as it was meant to be played — without limits, without rules, and without compromise.
